

Joni Dunkel

IT Engineering Student · Internet of Things

jorodunk@gmail.com · github.com/felnoodle

IT engineering student specialising in the Internet of Things. I build apps that turn data into something people can use, from sensor dashboards to games. Looking for an internship.

EDUCATION

Bachelor of Engineering, Information Technology (Internet of Things) — Expected 2028
Savonia University of Applied Sciences
Coursework includes mobile programming (Android), browser programming and IoT systems

Applied Physics studies — 2017–2018
University of Eastern Finland (Itä-Suomen yliopisto)

Bachelor's studies in Nanoscience, Physics — 2014–2016
University of Jyväskylä (Jyväskylän yliopisto)

High school diploma — 2012
Kallaveden lukio

PROJECTS

Predictive Maintenance Dashboard — Group project
IoT system that turns live sensor data into a health index, alerts and a remaining-useful-life estimate. Sensors publish over MQTT, an ingestion service scores readings on arrival, and a Streamlit dashboard ranks the fleet by maintenance priority and lets technicians dispatch work orders.
My part: Built the Streamlit dashboard and led development of the live MQTT data pipeline, the remaining-useful-life model and the work-order flow, using Claude Code for AI-assisted development.
Python · Streamlit · MQTT · SQLite · Machine Learning

Turn-Based Unity RPG — In development
Solo project.
Unity · C#

Home CO2 Sensor System
A sensor that monitors CO2 levels at home, with an online dashboard for tracking them over time.
Arduino · IoT · Arduino Cloud

MILITARY SERVICE

Corporal (alikersantti) · Jaeger Company — 2013
Kainuu Brigade (Kainuun prikaati), Finnish Defence Forces

SKILLS

Python · JavaScript · C# · Android · Unity · HTML · CSS · SQL · MQTT · Arduino · Raspberry Pi · Git · Excel

LANGUAGES

Finnish (native) · English (fluent) · Swedish (conversational)

INTERESTS

Gaming, programming, reading, swimming
